### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Livingston on 9-29-2005.

The application has been amended as follows:

In claim 1, at line 1, delete the phrase: " (nitrogen and carbon dioxide)".

The following is an examiner's statement of reasons for allowance:

The independent claim 1 recites, "at a third temperature and pressure state of the gas mixture: measuring the speed of sound in the gas mixture, determining the constant values for the gas mixture from the database, and substituting these values into the model equation, thereby obtaining a third equation for the molecular weight of the gas; solving the three equations for the diluent concentrations of the gas". This feature in combination with the remaining claimed structure avoids the prior art of record.

The independent claim 8 recites, "at a third temperature and pressure state of the gas mixture: measuring the speed of sound in the gas mixture, determining the constant values for the gas mixture from the database, and substituting these values into the model equation, thereby obtaining a third equation for the molecular weight of the gas;

solving the three equations for the combined diluent concentrations of the gas". This feature in combination with the remaining claimed structure avoids the prior art of record.

The independent claims 10 and 13 recite, "a first gas flow channel, having a high pressure valve and a low pressure valve, a bypass valve for bypassing at least one of the pressure valves, a speed of sound sensor, a temperature sensor, and a pressure sensor; a second gas flow channel, having a high pressure valve and a low pressure valve, a bypass valve for bypassing at least one of the pressure valve, a speed of sound sensor, a temperature sensor, and a pressure sensor". This feature in combination with the remaining claimed structure avoids the prior art of record.

U.S. Patents 5,060,506 to Douglas and 5,537,854 to Phillips et al disclose mixture analysis devices, but do not disclose the claimed valve and sensor arrangement.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Cherry whose telephone number is (571) 272-2272. The examiner can normally be reached on M-F 8:00-4:30.
